Name of Tool:	Driver Inventory (DI)
Author/Publisher (Year)	Lindeman/Behavior Data Systems Ltd. (1997)

Description:	
	• The DI is a 70-item, self-report computer scored test specifically designed for driver assessment. The Driver Inventory does not screen for alcohol or other drugs. • The items comprised 5 scales: (1) truthfulness scale, (2) aggressiveness scale, (3) driver risk range, (4) stress management, and (5) self-rating scale. • Percentile scores are used for risk classification "Low Risk," "Moderate Risk," "Problem Risk," and "Severe Problem." • Risk classifications, along with clinical judgement, are used to inform treatment recommendations. • Truthfulness Scale detects offender denial, problem minimization, and response bias. • Test administered requires 15 to 20 minutes and can be completed using traditional paper/pencil methods or using a computer. • Demonstrated reliability and validity.
Tool Development	
	Internal (unpublished) studies provide evidence of validity, reliability, and accuracy. Studies can be found as www.driver-inventory.com
General Notes:	
	• The DI is a computerized assessment that provides clinicians with a printed report that included percentile scores, risk classification, and item responses. • Test can be administered individually or in a group setting. • Additional information about the DI can be found at www.driver-inventory.com
