Name of Tool:	Juvenile Substance Abuse Profile (JSAP)
Author/Publisher (Year)	Behavior Data Systems

Description:	
	Designed for evaluating juveniles (14 to 18 years) The Juvenile Substance Abuse Profile is specifically designed for juvenile (male and female). This test is designed for school systems, juvenile screening programs and troubled youth treatment agencies. The JSAP has 116 items that comprise 5 scales: • Truthfulness Scale • Alcohol Scale • Drug Scale • Aggressiveness Scale • Stress Management Scale Scores are used to classify risk into four categories: • Low Risk • Medium Risk • Problem Risk and • Severe Problem These classifications, along with clinical judgment, are used to inform treatment recommendations. Truthfulness Scale detects offender denial, problem minimization, and response bias. Demonstrated reliability and validity.

Tool Development	
	Summary of scientific findings are available for download.

General Notes:	
	JSAP is a computerized assessment that provides clinicians with a printed report that includes percentile scores, risk classification, and item responses. The JSAP takes 20-25 minutes to complete. Tests can be administered individually or in group settings
