| Name of Tool: | Self-Audit (SA) |
| Author/Publisher (Year) | Behavior Data Systems |

| | |
|-------------------------|---|
| Description: | <p>The Self-Audit (SA) is designed for adult (male and female) counseling and treatment program intake. The SA can also be used in HMO's, EAP programs, courts, probation and community corrections. The SA has 160 items that make-up nine scales (measures):</p> <ul style="list-style-type: none"> • Truthfulness Scale • Distress Scale • Resistance Scale • Violence Scale • Alcohol Scale • Drug Scale • Self-Esteem Scale • Stress Coping Abilities Scale <p>The Self-Audit (SA) was developed in response to evaluators requests.</p> <p>Scores are used to classify risk into four categories:</p> <ul style="list-style-type: none"> • Low Risk • Medium Risk • Problem Risk and • Severe Problem <p>These classifications, along with clinical judgment, are used to inform treatment recommendations.</p> <p>Truthfulness Scale detects offender denial, problem minimization, and response bias.</p> <p>Demonstrated reliability and validity.</p> |
| Tool Development | Summary of scientific findings are available for download. |
| General Notes: | <p>SA is a computerized assessment that provides clinicians with a printed report that includes percentile scores, risk classification, and item responses.</p> <p>The SA takes 30-35 minutes to complete.</p> <p>Tests can be administered individually or in group settings.</p> |
